Add a Beer

You can add a new beer to BrewHorn but as of this phase, it is not integrated back to the master database at brewerydb.com.

Please proceed with profiling your new beer with BrewHorn but I advise you to also submit your new beer at http://www.brewerydb.com/add.

1. Enter the brewery name, beer name, ABV, and IBU (if available).

2. If you add a beer, make sure you also enter values for Mood, Venue, Event, and Hype before proceeding to profile the beer.

NOTE on future enhancement: *A priority enhancement will be adding integration back to the beer database to add your new entries. Your entries are saved in the BrewHorn database until the integration is accomplished.*
